

# Black Rhodium

## Opus

Opus will bring any budget system to life, through the following advanced processes employed by Black Rhodium:

- ✓ Uses high purity tinned copper wire for excellent stereo imaging, internally twisted for superior noise rejection, and smoother sound.
- ✓ Silicone rubber insulation, which offers low dielectric loss, reducing time smearing effects. This enables accurate portrayal of the attack of leading edges, as well as the natural decays in music.
- ✓ Terminated with our own high quality gold plated hourglass silhouette RCA Phono plug, for ease of use, especially in confined spaces, as well as superior connection and conductivity.
- ✓ Advanced quality control of the direction of wiring during the production process, delivering superior stereo imaging, as well as lower background noise.
- ✓ Directional heat shrinks are applied to the attractive white sheath. This ensures that you can achieve the full benefits from this directional, aesthetically pleasing cable, due to its ease of use.
- ✓ Cable manufactured in England, ensuring that we have close, face-to-face contact with the manufacturing and production facilities, and also shows that we support and are proud of British manufacturing.
